Equivalent kernels and their moments

Michal Kolesár

2022-07-08

This package also computes equivalent kernels for local linear regression and their moments. For orders r = 1, 2 (local linear and local quadratic), selected moments and equivalent kernels are computed analytically for the uniform, triangular and Epanechnikov kernels. Higher-order moments, and moments for other kernels with bounded support normalized to [-1, 1] are computed numerically.

The uniform, triangular and Epanechnikov kernels are defined as

$$k_{\rm U}(u) = \frac{1}{2}I(|u| < 1), \qquad k_{\rm T}(u) = (1 - |u|)I(|u| < 1), \qquad k_{\rm E}(u) = \frac{3}{4}(1 - u^2)I(|u| < 1).$$

We compute the following moments

$$\mu_j(k) = \int_{\mathcal{X}} u^j k(u) \, du, \qquad \nu_j(k) = \int_{\mathcal{X}} u^j k^2(u) \, du, \qquad \pi_j(k) = \int_{\mathcal{X}} |u^j k^2(u)| \, du,$$

where \mathcal{X} is [0,1] for boundary regression, and [-1,1] for interior regression, and k is a kernel of equivalent kernel.

Equivalent kernels

Define $M_r(k) = \int_{\mathcal{X}} p_r(u) p_r(u)' k(u) du$, where $p_r(u) = (1, u, \dots, u^r)$, so that $(M_r(k))_{i,j} = \mu_{i+j-2}(k)$. Then for local polynomial regression of order r using a kernel k, the equivalent kernel is given by

$$k^*: u \mapsto e'_1 M_r(k)^{-1} p(u) k(u), \qquad u \in \mathcal{X}$$

where e_1 is a vector of zeros with 1 in the first position. This assumes that the parameter of interest is the value of the regression function f at a point, which we assume throughout. For r = 0, the equivalent kernel is the same as the original kernel, except it is normalized so that it integrates to one over \mathcal{X} , $\int_{\mathcal{X}} k = 1$.

For the three kernels and boundary regression of order r = 0, 1, 2, the equivalent kernels are the following functions with domain [0, 1]

| Kernel | Order 0 | Order 1 | Order 2 |
|----------|----------------------|-------------------------------|--|
| U | 1 | (4 - 6u) | $3(3 - 12u + 10u^2)$ |
| ${ m T}$ | 2(1-u) | 6(1-2u)(1-u) | $12(1 - 5u + 5u^2)(1 - u)$ |
| E | $\frac{3}{2}(1-u^2)$ | $\frac{12}{19}(8-15u)(1-u^2)$ | $\frac{5}{8}(17 - 80u + 77u^2)(1 - u^2)$ |

For interior regression, the equivalent kernels are the following functions with domain [-1, 1] (orders 0 and 1 are the same)

| Kernel | Order 0 or 1 | Order 2 |
|--------------|-------------------------------|--|
| U T | $\frac{\frac{1}{2}}{(1- u)}$ | $\frac{\frac{1}{8}(9 - 15u^2)}{\frac{6}{7}(2 - 5u^2)(1 - u)}$ $\frac{\frac{15}{32}(3 - 7u^2)(1 - u^2)}{\frac{15}{32}(3 - u^2)(1 - u^2)}$ |
| \mathbf{E} | $\frac{3}{4}(1-u^2)$ | $\frac{15}{32}(3-7u^2)(1-u^2)$ |

The equivalent kernels can be computed with the function EqKern, which returns the equivalent kernel function

```
library("RDHonest")
EqKern("uniform", boundary = TRUE, order = 2)(0.5)
# Equivalent call
EqKern(function(u) u <= 1, boundary = TRUE, order = 2)(0.5)</pre>
```

Kernel Moments

The package stores analytically-computed low-order moments for the uniform, triangular, and Epanechnikov kernels for fast access in the dataframe kernC. The moments for boundary kernels are as follows:

| Kernel | Orde | μ_0 | μ_1 | μ_2 | μ_3 | μ_4 | ν_0 | ν_1 | ν_2 | ν_3 | $\overline{ u_4}$ |
|--------|------|---------|---------------|------------------|---------------------------------------|---------------------------------------|----------------------------|----------------------------|-----------------------------|---|--------------------------------------|
| U | 0 | 1 | 1/2 | $\frac{1}{2}$ | 1/4 | 1 5 | 1 | $\frac{1}{2}$ | $\frac{1}{2}$ | $\frac{1}{4}$ | 1 5 |
| Τ | 0 | 1 | $\frac{1}{3}$ | $\frac{1}{6}$ | $\frac{1}{10}$ | $\frac{1}{15}$ | $\frac{4}{3}$ | $\frac{1}{3}$ | $\frac{2}{15}$ | $\frac{1}{15}$ | $\frac{4^{3}}{105}$ |
| E | 0 | 1 | $\frac{3}{8}$ | $\frac{1}{5}$ | $\frac{1}{8}$ | $\frac{\frac{3}{3}}{35}$ | $\frac{6}{5}$ | $\frac{3}{8}$ | $\frac{\frac{6}{3}}{35}$ | $\frac{\frac{3}{3}}{32}$ | |
| U | 1 | 1 | 0 | $-\frac{1}{6}$ | $-\frac{1}{5}$ | $-\frac{1}{5}$ | 4 | 1 | $\frac{8}{15}$ | $\frac{2}{5}$ | $\frac{\frac{2}{35}}{\frac{12}{15}}$ |
| T | 1 | 1 | 0 | $-\frac{1}{10}$ | $-\frac{1}{10}$ | $-\frac{3}{35}$ 141 | $\frac{24}{5}$ 56832 | $\frac{\frac{3}{5}}{1770}$ | $\frac{\frac{6}{35}}{2976}$ | $\frac{\frac{3}{35}}{324}$ | $\frac{\frac{2}{35}}{12352}$ |
| Е | 1 | 1 | 0 | $-\frac{11}{95}$ | $-\frac{10}{133}$ | $-\frac{141}{1330}$ | $\frac{30832}{12635}$ | $\frac{1770}{2527}$ | $\frac{2976}{12635}$ | $\begin{array}{r} \frac{324}{2527} \\ \frac{81}{140} \end{array}$ | $\frac{12332}{138985}$ |
| U | 2 | 1 | 0 | 0 | $\frac{1}{20}$ | $\frac{3}{35}$ | $\frac{9}{72}$ | $\frac{3}{2}$ | $\frac{27}{35}$ | 4 | $\frac{\frac{11}{35}}{4}$ |
| E. | 2 | 1 | 0 | 0 | $\frac{\frac{1}{35}}{\frac{15}{448}}$ | $\frac{\frac{3}{70}}{\frac{13}{252}}$ | $\frac{\frac{7}{7}}{9895}$ | $\frac{1}{4105}$ | $\frac{\frac{3}{35}}{325}$ | $\frac{1}{35}$ 2825 | 16795 |
| | | 1 | U | 0 | 448 | $\overline{252}$ | 1008 | 4032 | $\overline{1008}$ | $\overline{16128}$ | 144144 |

For interior regression (recall order 0 and 1 give the same kernel)

| Kernel | Order | μ_0 | μ_2 | μ_4 | ν_0 | ν_2 | ν_4 |
|--------------|-------|---------|---------------|-------------------|-------------------|-------------------|-------------------------------|
| U | 0 | 1 | $\frac{1}{3}$ | $\frac{1}{5}$ | $\frac{1}{2}$ | $\frac{1}{6}$ | $\frac{1}{10}$ |
| Τ | 0 | 1 | $\frac{1}{6}$ | $\frac{1}{15}$ | $\frac{2}{3}$ | $\frac{1}{15}$ | $\frac{2^{\circ}}{105}$ |
| \mathbf{E} | 0 | 1 | $\frac{1}{5}$ | $\frac{3}{35}$ | $\frac{3}{5}$ | $\frac{3}{35}$ | $\frac{1}{35}$ $\frac{1}{23}$ |
| U | 2 | 1 | 0 | $-\frac{3}{35}$ | $-\frac{9}{8}$ | $-\frac{9}{56}$ | 280 |
| Τ | 2 | 1 | 0 | $-\frac{19}{490}$ | $\frac{456}{343}$ | $-\frac{1715}{1}$ | $-\frac{256}{18865}$ |
| \mathbf{E} | 2 | 1 | 0 | $-\frac{1}{21}$ | $\frac{5}{4}$ | $-\frac{25}{308}$ | $-\frac{85}{4004}$ |

We also store absolute moments. At the boundary:

| Kernel | Order | π_0 | π_1 | π_2 | π_3 | π_4 |
|--------------|-------|-----------------------------------|--------------------------|-----------------------------|--------------------------------|-------------------------------------|
| U | 0 | 1 | $\frac{1}{2}$ | $\frac{1}{3}$ | $\frac{1}{4}$ | 1 5 |
| ${ m T}$ | 0 | 1 | $\frac{\overline{1}}{3}$ | $\frac{9}{6}$ | $\frac{2}{10}$ | $\frac{1}{15}$ |
| \mathbf{E} | 0 | 1 | $\frac{3}{8}$ | $\frac{3}{5}$ | $\frac{1}{8}$ | $\frac{3}{35}$ |
| U | 1 | $\frac{5}{3}$ | $\frac{16}{27}$ | $\frac{59}{162}$ | $\frac{113}{405}$ | $\frac{35}{857}$ $\frac{857}{3545}$ |
| ${ m T}$ | 1 | $\frac{3}{2}$ | $\frac{3}{8}$ | $\frac{3}{16}$ | $\frac{1}{8}$ | $\frac{3}{22}$ |
| E | 1 | $\frac{10048\overline{3}}{64125}$ | $\frac{702464}{1603125}$ | $\frac{16520549}{72140625}$ | $\frac{235792912}{1514953125}$ | $\frac{1792724653}{15149531250}$ |

| Kernel | Order | π_0 | π_1 | π_2 | π_3 | π_4 |
|--------------|-------|------------------------------|--------------------------|---------------------------|-----------------------------------|-----------|
| U | 2 | $1 + 12\frac{\sqrt{6}}{5^2}$ | $\frac{36\sqrt{6}}{5^3}$ | $\frac{558\sqrt{6}}{5^5}$ | $\frac{1782\sqrt{6}}{5^6} + 1/20$ | 0.268931 |
| ${ m T}$ | 2 | $1 + \frac{2}{\sqrt{5}}$ | $\frac{24\sqrt{5}}{5^3}$ | $\frac{12\sqrt{5}}{5^3}$ | $\frac{218\sqrt{5}}{4375} + 1/35$ | 0.102656 |
| \mathbf{E} | 2 | 2.0051585 | 0.50792888 | 0.26617935 | 0.17770885 | 0.1321148 |

In the interior:

| Kernel | Order | π_0 | π_1 | π_2 | π_3 | π_4 |
|----------|-------|---------|---------------|---------------|----------------|----------------|
| U | 0 | 1 | $\frac{1}{2}$ | $\frac{1}{3}$ | $\frac{1}{4}$ | 1/5 |
| ${ m T}$ | 0 | 1 | $\frac{1}{3}$ | $\frac{?}{6}$ | $\frac{1}{10}$ | $\frac{1}{15}$ |
| E | 0 | 1 | $\frac{3}{8}$ | $\frac{1}{5}$ | $\frac{1}{8}$ | $\frac{3}{35}$ |
| U | 2 | 1 | 0.4875 | 0.27885480 | 0.1975 | 0.157419807 |
| Τ | 2 | 1 | 0.31155912 | 0.13986945 | 0.08443054 | 0.060140887 |
| E | 2 | 1 | 0.36033164 | 0.17177502 | 0.10671010 | 0.077066194 |

Finally, in the column kernC\$pMSE, the package stores the optimal constant for pointwise MSE optimal bandwidth (see Fan and Gijbels, page 67):

$$\left(\frac{(p+1)!^2\nu_0}{2(p+1)\mu_{p+1}^2}\right)^{\frac{1}{2p+3}},$$

where p is the order of local polynomial.

For other kernels, the moments can be computed using the KernMoment function:

```
## mu_1, should be 0
KernMoment(function(u) 4-6*u, moment = 1, boundary = TRUE, type = "raw")

## [1] -5.551115e-17

## nu_1, should be 0
KernMoment(function(u) 4-6*u, moment = 1, boundary = TRUE, type = "raw2")

## [1] 1

## pi_1, should be 16/27
KernMoment(function(u) 4-6*u, moment = 1, boundary = TRUE, type = "absolute")
```
